

# ThermAlloy<sup>®</sup>

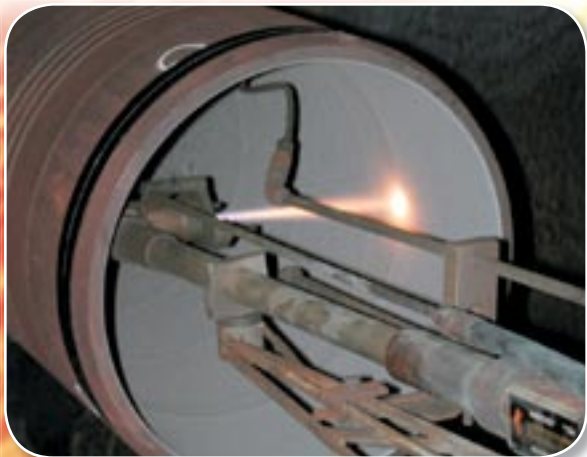

Revolutionary process  
for power cylinder bores

*Exclusively from Exline, Inc.*

## Restore your power cylinders with Exline

**T**hermAlloy<sup>®</sup> is the Thermex spray application of complex powder alloy exclusively formulated for Exline. Advances in thermal spray technology, both in coatings and application equipment, coupled with years of development by Exline, Inc. have created this revolutionary product.

## Compare the features and benefits to current repair practices and even new cylinders.

### FEATURES

- Harder than cast iron
- Better scuff resistance than iron or chrome
- Consistent porosity through depth of the coating
- Can be de-glazed at ring change
- Line bore each cylinder on center line

### BENEFITS

- Better wear characteristics than new, iron plated or chromed cylinders
- Restore worn cylinders to standard dimensions from .100" oversize
- Minimize your maintenance requirements
- Not limited to specific piston ring material

## Want Results? ThermAlloy Delivers

The result of over 16 years of field testing with a wide range of engine models. Over two million hours of run time, with no failures. The results speak for themselves.

### Power Cylinder Types

- |          |                   |               |
|----------|-------------------|---------------|
| • Ajax   | • Enterprise      | • Worthington |
| • Alco   | • Fairbanks Morse | • Others      |
| • Clark  | • Ingersoll       |               |
| • Cooper | • Nordberg        |               |

### New & Repair Power Cylinder

Power cylinders can be repaired multiple times.

### Inspection Process

The Exline inspection process cleans, inspects and evaluates, including NDT and pressure testing, power cylinders.

### Extended Warranty

In addition to the operating benefits of ThermAlloy, Exline will warranty this product for 18 months or 13,000 hour run time, whichever comes first.

### Any questions?

If not, we are ready to prove how this revolutionary process can benefit your engine operations.
