## Performance Guarantee by Exline Inc.

-Exline will provide testing for correct data, and provide a final test from a NESHAP / EPA certified company to comply with NESHAP ruling. Operational parameters will be provided to the customer for engine operation to meet 70% reduction after final testing has been performed. A Service technician from Exline will be on site to review with the customer engine operation and engine parameters during flow and exhaust temperature testing.

### **\*\*Special Note\*\***

**The existing quote is based on data supplied by the customer and is subject to change pending Exline Inc. testing of the engine parameters required for sizing and design of the catalyst for the unit. If the engine data is different and the parameters for manufacturing the catalyst has changed, a new quote will be presented to the customer for approval before proceeding with manufacturing of the catalyst.**

-Exline Guarantees installation labor and materials costs of the catalyst unit and all associated components if after acquiring test data, building and installation of the catalyst, the performance test fails to make the unit NESHAP compliant with 70% reduction. Unit would be put back into operation by removing the catalyst and re-installation of exhaust piping and insulation as required to customers satisfaction if unit can not be made to comply to 70% reduction.

**\*\*Note existing damaged items such as cracked piping flanges, cracked expansion joints, damaged insulation, etc will be subject to warranty claims.**

-Exline Guarantee also will include coverage on all turbocharger flanges, turbocharger casings, stress factors to expansion joints, and exhaust mufflers as required due to piping and structural support changes made for the catalyst installation.

**\*\*Existing conditions of exhaust systems and turbochargers would be subject to warranty claims**

-DCL Factory Guarantee for catalyst  
See attached

-Turbocharger back pressure will be covered under the performance guarantee to the extent not to exceed OEM (Original Engine Manufacture) engineering back pressure specifications and or test data acquired during original tests on the unit exhaust system performed by Exline certified sub-contractor. If there is a back pressure issue the exhaust system including the exhaust silencer will need to be reviewed to determine issues and correct as required. If the exhaust silencer is determined the problem a new silencer will need to be installed for the application to make the unit compliant. This would be an additional cost to the customer.

-Installation of catalyst in the most efficient area to optimize the operation of the catalyst, and for servicing the unit (Some installations will vary due to job site application)

-Supply and install all test & monitoring equipment for continuous monitoring per as per required by & utilizing NESHAP approved monitoring equipment Warranty to apply for one year after installed and unit put back into service.

-Guarantee is for one year after catalyst elements are installed and in service. An extended warranty would be available for review per the customer request.
