

From simple, efficient and cost-effective, to technologically advanced...we build control panels to suit every need!

For nearly thirty-years, Altronic Controls in Garland, Texas has been innovating and producing high value control system solutions for the gas compression and global energy industries.

The solutions offered to our customers have changed with time. Altronic DE control systems—now packaged and provided in the innovative and scalable Flex Panel System—have become a new industry standard. In addition to the Altronic product-based control panels that formed its foundation, Altronic Controls is now well-known and respected in the industry for the design and configuration of PLC-based control systems.

But, even after all these years, much in Garland remains the same. The premium technical support provided by both factory and global Altronic Distributor personnel remains a key commitment to our customers. Thousands of panels and customers later, Altronic Controls' reputation for quality and value has been tested and proven time and again by packager, lease fleet, and end-user customers around the world.

Altronic Controls, a generational partner in providing high-quality control systems for natural gas compressor packagers and operators worldwide.
